

Deploiement de l'application sous Firebase hosting

```
npm install -g firebase-tools
```

```
firebase login
```

```
C:\Users\LENOVO>cd..
```

```
C:\Users>cd..
```

```
C:\>cd FirstApp
```

```
firebase init
```

Are you ready to proceed? **Yes**

Please select an option: **Use an existing project**

Choisi ton projet firebase

What do you want to use as your public directory? **dist/first-app** (à récupérer du fichier angular.json de ton projet Angular [outputpath])

Configure as a single-page app (rewrite all urls to /index.html)? **No**

Set up automatic builds and deploys with GitHub? **Yes**

For which GitHub repository would you like to set up a GitHub workflow? (format: user/repository)

imen/DEPOT (met username/nom de ton depot git(qui est vide))

No

No

***** ajoute dans angular.json de ton projet angular : architect / options 'baseHref'= '/'

Si la taille de ton projet est grande , modifie dans angular.json : Production / Budgets : "maximumWarning"

: 1mb / "maximumError" : 3 mb

```
ng build --configuration production
```

```
firebase deploy => tu aura le lien pour acceder à l'application
```
